How To: iPhone App

Use the Walker Tracker app to log steps with a manual pedometer or view your data from a connected wireless device.

1) Go to the app store on your iPhone and type in “Walker Tracker”. Make sure the one you download has our logo on it.

2) Once downloaded, you can log in with your username and password that you set up when you registered.

3) You can add or edit entries on the “Your Activity” page. If you are syncing with a wireless device this will be populated with your data.

You can also set up your HealthKit app to sync with Walker Tracker. *optional and only available in some programs

You will see your daily progress on the chart at the bottom of this page.

4) Check out the competition page to see how you’re doing on the leaderboard.
Syncing with Apple HealthKit

If you use Apple Health Kit on your iOS device as your pedometer, you can sync it to your Walker Tracker account via the Walker Tracker App.

If you have the Health app on your phone, you will see the option to toggle it on in the upper right-hand corner of the Walker Tracker app.

When you have the app linked to your Walker Tracker you will see the heart in the upper left-hand corner and the last date and time you synced.

To turn Health off, click on “More” in the lower right-hand corner.
