

## California Million Light Bulb Challenge

The University of California created the Million Light Bulb Challenge to make high-quality, high-efficacy LED light bulbs available to students, staff, faculty, alumni and retirees at a great price! The light bulbs being offered through the challenge cost on average 46% less than the same light bulbs sold through online competitors.

The goal is to swap out at least one-million inefficient light bulbs and replace them with the LED light bulbs. Help your campus contribute to the goal and visit the website to see our progress. Each light bulb counts!
